PROFESSIONAL EXPERIENCE

Software Developer

Noorisys Technologies

Contributed to multiple projects, received the Rising Star Award for remarkable performance as a Jr. Developer, & represented the company at Gitex Global & Expand North Star 2024 in Dubai alongside the CEO & CTO.

Oct 2023 – present
Malegaon, India

PROJECTS

TMA / Lokkarroom

Took over and reverse-engineered an undocumented Next.js (Pages Router) old version + TypeScript codebase and delivered membership, templating, and ticketing features without formal KT.

- Built bulk membership management and redeem membership workflows.
- Designed admin onboarding and dynamic template system; shipped 10+ club page templates.
- Integrated Seats.io into the ticketing flow for real-time seat selection.
- Fixed premium-content leaks by diagnosing and correcting logic that allowed non-premium users to access gated content.
- Integrated Google and Facebook OAuth2 authentication across main and microsite domains, unifying session management.
- Removed Veriff SDK procedures and dependencies, streamlining user flows and simplifying token purchase processes.

Voiture - France-based used-car auction platform

Led frontend architecture & built all three web panels (Merchant, Showroom Owner, Super-admin) from scratch.

- Built end-to-end auction flows (online/physical/hybrid) with real-time bid sync and manual + proxy (automatic) bidding.
- Implemented full vehicle onboarding and listing UX using Autobiz API for car details & quotation (includes paid-quote gating).
- Created admin features: role & permission management, commission/fee workflows, reporting & PDF/Excel exports..
- Technologies: Next.js, TypeScript, Redux Toolkit, Tailwind CSS, WebSockets, Autobiz, SIRENE API, Google Maps.

Questionnaire - Survey Form Generator

A survey form generator with a dual-panel interface for creating & participating in surveys.

Features:

- Survey Creation: Admins can design and configure detailed surveys with various answer types.
- Logic Configuration: Handled complex dynamic question logic, where questions depend on previous answers, ensuring a smooth, responsive experience during both design and user interaction phases.
- Survey Participation: Users can complete and interact with the surveys created by admins.

Technologies: Next.js, TypeScript, Tailwind CSS.

Zowar - Online Travel Agency

A travel management web app for booking flights & trains, with admin & multilingual support — Led frontend architecture and built the entire user & admin experience from scratch for Zowar.

Features:

- Flight Module: Integrated Amadeus API for searching & booking flights.
- Train Module: Integrated Harmain API for booking & managing train journeys in Saudi Arabia.
- Admin Panel: Developed a backend interface for managing bookings, users, & settings.
- Multilingual: Supports multiple languages & language directions (like RTL for Arabic), ensuring seamless localization & cultural adaptation.

Technologies: Next.js, TypeScript, Redux Toolkit, Tailwind CSS, Amadeus APIs, Haramain APIs, Amazon Payment Services integrations.

SKILLS

Next.js

React

Redux

JavaScript

TypeScript

Tailwind

React Native

GraphQL

Jest.js

AWS (EC2, S3, Lambda, IAM)

Node.js & Express.js

WebSockets

WebRTC

Git & GitHub

MongoDB

AWARDS & ACHIEVEMENTS

Rising Star Award

Awarded for remarkable performance as a Junior Developer at Noorisys Technologies.

2024

Gitex Global & Expand North Star 2024 | Dubai, UAE

Explored AI, blockchain, and IoT trends while networking with global tech leaders and startups, gaining insights into innovative technologies.

2024

EDUCATION & CERTIFICATIONS

Full Stack JavaScript Development
